## **1. Introduction:**

Covid-19 epidemic is one of the most difficult challenges that humans face with. The spread of covid-19 caused many changes in the education of students all over the world and forced many students to pass the units virtually. This sudden transition made the educational system face many challenges. Therefore, this study has been conducted with the aim of reviewing the studies conducted on the challenges in the education system after covid-19.

## **2. Search Strategy:**

A narrative review of scientific literature using the PRISMA guideline was completed, and included literature published from January 2020 until May 2024. The articles related to Childbearing challenges in working women in Iran were obtained through Google Scholar, SID, Magiran Scopus, PubMed, and Web of Science databases using related keywords. The inclusion criteria of the articles included original Iranian articles, having Latin and Persian language and the presence of keywords in the title

## **3. Results:**

44 articles were identified through an initial search and finally, 5 studies were entered into the analysis. The results of studies are showed that the effect of Covid-19 on education has been extremely complicated. We all know very well that The most important goal of education centers is to train capable students and according to the current conditions for to achieve this goal, we need to reconsider the way of education.

## **4. Conclusion and Discussion:**

The study contributes to the understanding of the university management in the post-COVID era, giving evidence of the magnitude of the impact of management in the crisis condition, which led to a deeper understanding of the international cooperation needed to protect us. In the four strategies, this study improves current knowledge regarding university management in the post-COVID era

## **5. Keywords:**

Education, post covid 19, challenge
